NISSAN

2009-10 Cube

L4-1.8L

TOOLS NEEDED:

Ratchet
Extension
12mm socket
10mm socket
Pliers
Flat blade screw driver
Phillips screw driver
10mm wrench
3mm allen wrench.

PARTS LIST:

Description	Qty.	Part #	Description	Qty.	Part #	Description	Qty.	Part #
A Hose Clamp #44 Stainless	2	08560	I Washer; 1/4" Lock, ZN	4	08198	Q Stud; M6-1.00 M/M, Rubber Mntd	1	07027
B Hose; 2-3/4" ID X 2" L Reinforced	1	08440	J Bolt; 6MM-1.00 X 16MM, SS	5	07812	R Washer; 1.25D X. 28 HOL	2	08151
C Intake Tube	1	27445	K Edge Trim (44")	1	102486	S Washer; 1" X .300 X .100 Rubber	1	21685
D Hose; 1/2" ID X 9" L	1	08401	L Hose Clamp #44	1	08577	T Stud; M/F, 1/2" L X 1" W, M6 X 1.00	2	070228
E Vent; 90Deg, 1/2"Hose, 1/4"NPT,	1	08110FK	M Super Glue	1	Roush-409	U Bracket; "Z", 69-7077, STL, TK/PC	1	083125
F Bolt; M4 - 0.07 8MM, A/H Cap, SS	2	07733	N Air Filter	1	RC-9350	V Heat Shield	1	074052
G Bracket; "C", STL, TK/PC	1	083124	O Nut; 6MM Nylock, Hexhead, SS	5	07512	W Edge Trim (7")	1	102452
H Washer; 1/4"ID X 5/8"OD - SAE	9	08275	P Bracket; "Z", STL, TK/PC	1	010033	X Venturi, MAF Insert, 2.75"	1	9-479

NOTE: FAILURE TO FOLLOW INSTALLATION INSTRUCTIONS AND NOT USING THE PROVIDED HARDWARE MAY DAMAGE THE INTAKE TUBE, THROTTLE BODY AND ENGINE.

TO START:

1. Turn off the ignition and disconnect the negative battery cable.

NOTE: Disconnecting the negative battery cable erases pre-programmed electronic memories. Write down all memory settings before disconnecting the negative battery cable. Some radios will require an anti-theft code to be entered after the battery is reconnected. The anti-theft code is typically supplied with your owner's manual. In the event your vehicles' anti-theft code cannot be recovered, contact an authorized dealership to obtain your vehicles anti-theft code.

2. Disconnect the mass air sensor electrical connection.

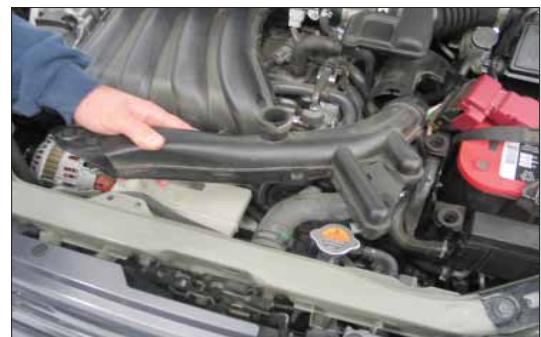

3. Remove the two bolts which secure the engine cover then remove the engine cover as shown.

4. Lift the intake resonator up to unhook it from the three mounting grommets and then remove the resonator from the vehicle.

5. Release the center locking pins and then remove the two mounting pins securing the fresh air inlet tube.

6. Remove the upper fresh air inlet duct from the vehicle.

7. Remove the positive battery cable and battery mounting bracket, then remove the battery from the vehicle.

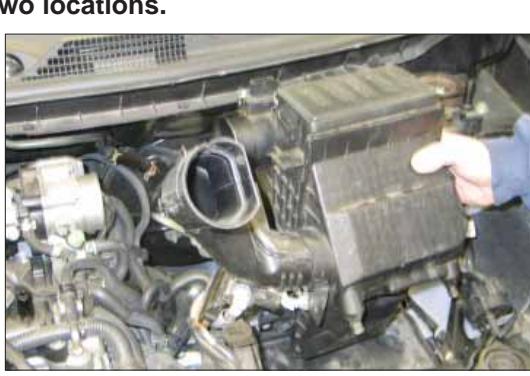

8. Loosen the two hose clamps securing the intake tube and the spring clamp securing the crank case vent hose to the valve cover.

9. Remove the intake hose assembly.

10. Disconnect the transmission vent line and wiring harness from the air box.
NOTE: the transmission vent line is held on in two locations.

11. Lift up the air box to dislodge it from the mounting grommets and then remove the air box from the vehicle.

NOTE: K&N Engineering, Inc., recommends that customers do not discard factory air intake.

12. Remove the three air box mounting grommets shown from the air box mounts.

13. Unhook the wiring harness shown from the water neck housing location shown.

14. Unhook the evap/fuel lines from the mounting bracket, install the provided tube mounting bracket (083124) onto the water neck boss and secure with the provided hardware. Secure the evap/fuel lines to the hole provided in the tube mounting bracket.
NOTE: The tube mounting bracket will attach to the water neck housing location referenced in step #13.

15. Install one of the provided rubber mounted studs onto the rear air box mounting bracket as shown.
NOTE: be sure to use two fender washers and one rubber washer provided to while securing the rubber mounted stud to the bracket.

16. Install the provided bracket (010033) onto the rubber mounted stud installed in step #16 and secure with the provided hardware.

17. Install the two provided rubber mounted studs onto the heat shield mounting bracket (083125) as shown. Do not completely tighten at this time.

18. Remove the air box mounting plate bolt shown.
NOTE: This bolt will be reused in the next step.

19. Install the heat shield mounting bracket assembly onto the air box mounting plate as shown and secure with the bolt from the previous step.

20. Install the provided edge trim onto the heat shield as shown.

NOTE: Some trimming of the edge trim will be necessary.

21. Install the provided edge trim into the heat shield fresh air duct opening as shown.

NOTE: Some trimming of the edge trim will be necessary.

22. Set the heat shield into position on the mounting bracket and rubber mounted studs then adjust as necessary. Secure the heat shield and bracket with the provided hardware.

23. Install the provided silicone hose (08440) onto the throttle body and secure with the provided hose clamp.

24. Remove the screws securing the mass air sensor and then remove the mass air sensor from the stock air box.

Continued

INSTALLATION INSTRUCTIONS

25. Install the mass air sensor into the K&N® intake tube and secure with the provided hardware.

31. Reconnect the mass air sensor electrical connection.

36. Reinstall the intake resonator onto the fresh air intake duct.

26. Install the mass air sensor venturi into the K&N® intake tube as shown.

NOTE: Apply a thin coat of the provided super glue on the lip of the venturi.

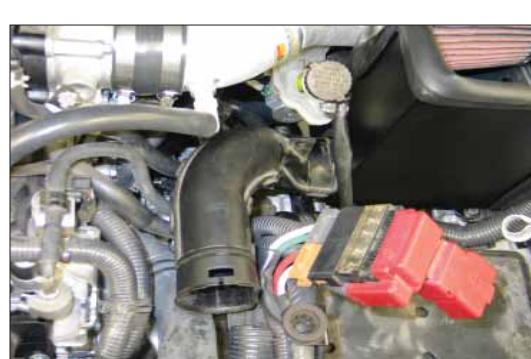

32. Remove the lower fresh air duct from the air box as shown.

37. Reinstall the engine cover and secure with the factory mounting bolts.

27. Install the provided 90° vent fitting onto the K&N® intake tube as shown.

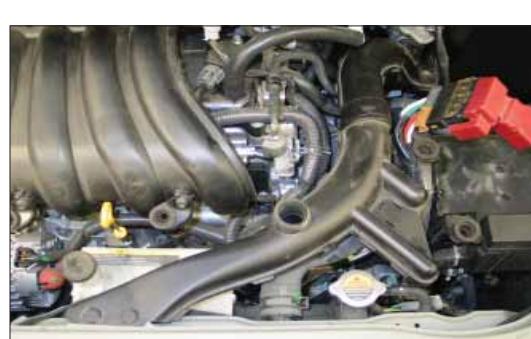

33. Install the lower fresh air duct into the heat shield as shown.

38. Reconnect the vehicle's negative battery cable. Double check to make sure everything is tight and properly positioned before starting the vehicle.
39. It will be necessary for all K&N® high flow intake systems to be checked periodically for realignment, clearance and tightening of all connections. Failure to follow the above instructions or proper maintenance may void warranty.

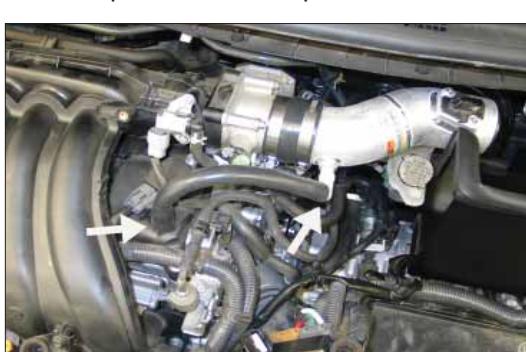

28. Install the K&N® intake tube into the silicone hose at the throttle body and align with the tube mounting bracket. Secure the intake tube with the hose clamp and hardware provided.

34. Install the upper fresh air duct into the lower section and then secure with the factory retaining clips to the radiator core support.

2. Test drive the vehicle. Listen for odd noises or rattles and fix as necessary.

29. Install the provided silicone hose onto the crank case vent port on the valve cover and then attach the other end to the 90° fitting installed in the K&N® intake tube.

3. If road test is fine, you can now enjoy the added power and performance from your kit.

30. Install the K&N® air filter onto the intake tube and secure with the provided hose clamp.

4. K&N Engineering, Inc., suggests checking the air filter element periodically for excessive dirt build-up. When the element becomes covered in dirt (or once a year), service it according to the instructions on the Recharger® service kit, part number 99-5050 or 99-5000
