

2014 JEEP GRAND CHEROKEE 3.0L DIESEL

Warning: When working on, under, or around any vehicle exercise caution. Please allow the vehicle's exhaust system to cool before removal, as exhaust system temperatures may cause severe burns. If working without a lift, always consult vehicle manual for correct lifting specifications. Always wear safety glasses and ensure a safe work area. Serious injury or death could occur if safety measures are not followed.

Step 1: (Carefully read all instructions before installation) To remove the OEM exhaust system loosen the clamp fastening the Y-Pipe/Muffler Assembly to outlet of the catalytic converter, un-clip the ground strap from the rear hanger and disengage the hangers from the rubber insulators. Do not discard the OEM band clamps or damage the OEM rubber insulators, as they will be used to mount the new system.

Step 2: Begin installation of the new system by attaching the Y-Pipe Assembly to the catalytic convert outlet using the supplied 2.75" clamp (Leave all the clamps loose for the final adjustment of the complete system). Install the driver and passenger side extension pipes using the supplied 2.25" clamps. Finish by attaching the muffler assemblies to the extension pipes with the supplied 2.25" clamps and fitting the hangers into the OEM insulators. Clip the ground strap to the hanger.

Step 3: With all components mounted loosely, adjust the system for overall aesthetics and clearance of frame & bodywork. (MAGNAFLOW recommends at least 1/2" of clearance between the exhaust system and any body panels to prevent heat-related body damage or fire.)

Step 4: Once a final position has been chosen for the new system, evenly tighten all fasteners from front to rear. The supplied band clamps must be VERY tight to properly align the pipes and prevent leaks (Approximately 40ft-lbs). Inspect all fasteners after 25-50 miles of operation and retighten if necessary.

**** Magnaflow Performance Exhaust recommends professional installation on all their products**
