Your satisfaction with our product is important, so if you have any questions, please call our customer service line at 800-528-0950. For warranty information, visit our website at www.kchilites.com.

PLEASE READ

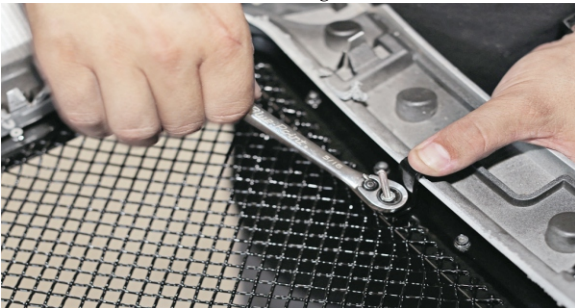

- **KC HiLiTES strongly recommends professional automotive & aftermarket accessory knowledge for proper installation of this grill.**
- **You will be cutting the factory grill, returning back to stock may not be possible once completed.**

STEP 1 - To install your new grille, you will need to remove the grille shell from the vehicle, as this will allow you to do the necessary prep work before installing your new grille. Remove the 6 nuts at the top portion of the grille shell.

STEP 3 - Now that you have completed cutting the center portion of the grill, you will now be able to remove the center of the stock grille shell.

STEP 5 - Once you have completed step 4, you will now be ready to install your new grille. **NOTE** - Before installing the new grille, install the LED bar and tighten securely. Ensure the LED cable is fed to a location that can easily be reached for connecting to the harness after the grille is in place. Center it on top of the stock grille shell and begin installing the hardware provided and secure the grille in place.

STEP 2 - You will need to cut the center portion of the stock grille with a disc cutter or saw to allow the new grille to be installed. We recommend marking a 1/4 inch border to allow you to see where you will need to cut. You may cut the bars right to the edge of the inner leaving it flush to the edge.

STEP 4 - Inspect the inside of the stock grille and remove any rough edges with a disc sander. This will provide an even and clean edge.

STEP 6 - Now that you have completed step 5 you will be ready to install the grill shell back on the vehicle using the same hardware that you previously removed.

STEP 7 - Wire your LED bar according to the instructions included with the bar.

You're Done !!!
